Game

Virtua
Card
Binde

Zener
cards

Kinda unrelated, but something cool
I found while domain searching (tm)

Game-related

Virtual Card Binder

Digitizing Cards

Take image of said physical card and introduce way to store it in the web app

- Intended User - physical card collector
- Areas of Interest: entertainment/hobbyists
- Problem: No way to store and keep track of cards in a digital format
- Pros:
 - Relatively novel and interesting idea
- Cons:
 - Limited by lack of database storage/online capabilities
 - Camera capturing can be complicated

Create custom playing cards

These are kinda peak

Would have to be pretty limited, e.g. only a few customizable categories (frame, color, background, etc.) and number/text stats

A Dungeons & Dragons character sheet template. It includes sections for CHARACTER NAME, CLASS & LEVEL, BACKGROUND, PLAYER NAME, AGE, ALIGNMENT, and EXPERIENCE POINTS. It also has sections for STRONGS, WEAKNESSES, SKILLS, and ABILITIES. The skills section includes a list of skills with checkboxes and a table for skill scores. The abilities section includes a list of abilities with checkboxes and a table for ability scores. The template is designed to be filled out with a character's information.

Parse Given Information

Textbook
to card
graph
visualizer

The purpose of a card in this case would be to give the user an accessible and engaging way to sort through large amounts of data that would be tedious to go through on its own. Thus, the cards serve a purpose in solving an actual problem for the user

Take information from a educational text and separate it into digestable chunks. i.e. auto graph visualizer for chapters and subsections of a textbook. user can input cards for notes and/or images to help remember.

Usefulness: Quickly and easily get a birds eye view of dense texts and content for the purpose of visualizing what they need to learn: turn pages/sections into cards and create an internal link to that page in a pdf

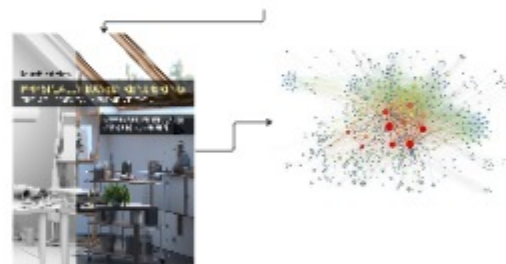

Ideas for design:
Download online archive(or keep some small subset of data) and keep in program so it works offline. Then if we go online we can go out and download a larger set

Planet
Cards

Auto generate cards based off of NASA's database of exoplanets. Making cool visuals using information (like Spectroscopy)

Research Domain: how to turn Spectroscopy into visuals, consult Astronomy Club?

Fortune
Telling

Tarot card reading, or some sorta 8 ball thing that
pulls a card with a task

Mailing Complaint Cards

Interface to write out a complaint card with animations of sending it to an inbox and then opens in your mail app the message

Time Logger - Card Version

Draw from a bag of cards to set the timer while logging the time.

Workout

Writing

15 min

30 min

Workout

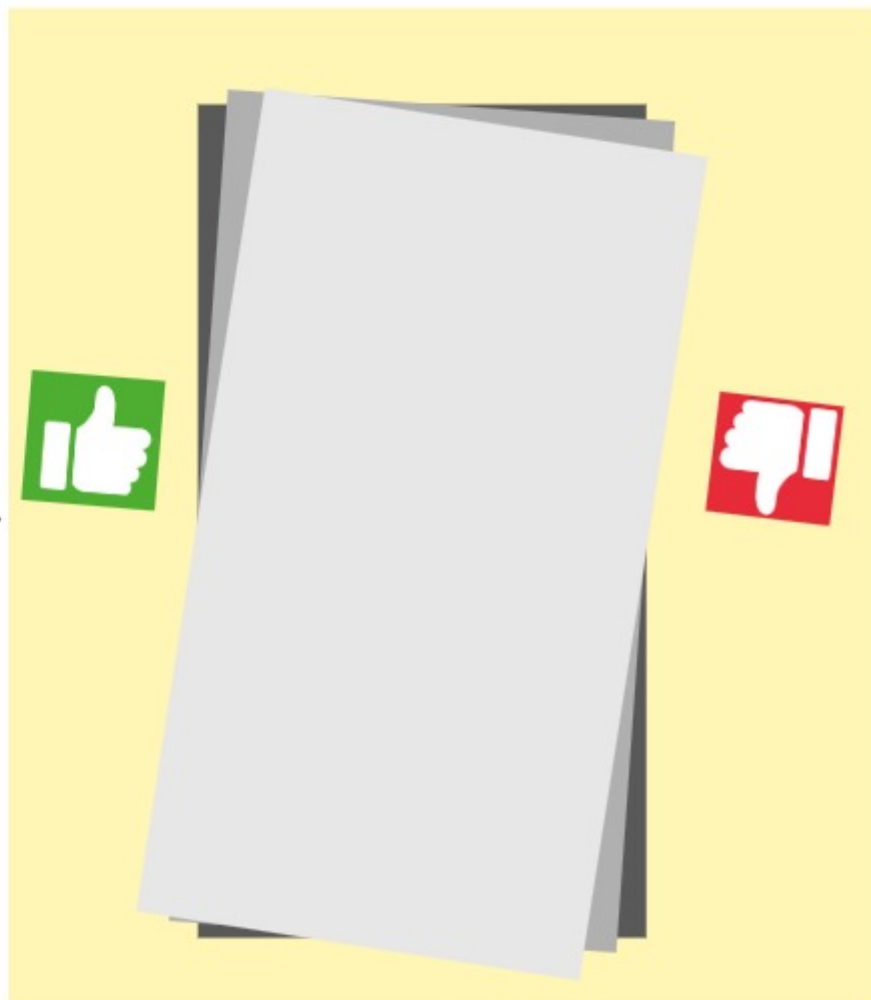

15 min

You have worked on 15 minutes today.
Past-7-day average is 45 min.
Good job!

Sliding Media Classifier

Import a folder of media files. Slide left or right to choose keep or discard. At the end, the user can export classified zip files.

- Things to consider
 - Types of card web apps
 - Intended Users/Target Audience
 - Areas of Interest
 - Problem/Solution
 - Pros and Cons of chosen idea

- Decide on type of web app we're building
 - Game related
 - Gacha random packs with rarity
 - collecting
 - Scan physical cards into a virtual space
 - Flashcard/studying
 - Business cards
 - Invitation Cards
 - Postcards
 - Polaroid photo type of thing
 - Card Creator
 - Cards can be rated by other people
 - Tinder swipe mechanic card app
 - LinkedIn/business/company swipe cards
 - You can create your own card with picture & details
 - Icebreaker type app
 - Get to know you card w/ icebreaker games
 - Positive Affirmations
 - People pick a card for a reflection question, affirmation, etc.
 - Icebreakers
 - Pre-populated icebreakers
 - But also users can submit their own cards
 - Choose a problem area that we want to work on
 - Community/Social
 - Entertainment
 - Academic
 - Career Related
 - Environmental
 - Mental Health
